Attn: Mr. Michael Low

Dear Sir,

RE: Proposed Silicone Emulsion Plant at Pulau Indah, Klang
Contractor Performance Assessment

We refer to the above and would like to inform you that the above work undertaken by your company has been evaluated during our Contractor Approval Committee Meeting No. 32 on 08th June 2017.

We would like to inform you that the overall grading of your work performance was rated as **Good (Highly Recommended)**. This assessment was based borehole testing & UD sampling, vane shear test, cone penetration tests, dissipation tests and laboratory testing.

In the abovementioned project, we would like to highlight that problems occur when the contractor shift the boring machine from one point to another point. The worker receives instruction from the contractor's management without discussing with G&P when deviate from work program. The project manager also always want to terminate early (vane shear), due to likelihood of damaging the vane shear equipment.

However, we observed that contractor's promise during interview is not credible when they promise able to mobilise the drilling rig four days earlier than other tenderers. Eventually, the contractor mobilised at the same date as the next earliest tenderer.

Our recommendation is the contractor's management team should not directly instruct their worker without discussing with G&P staff first; i.e.: Project manager should seek confirmation from G&P's engineers for any deviation of work program.

We hope you can improve on the above in the future.

Please do not hesitate to contact us should you require further information.

Thank you.

Yours faithfully,
G&P GEOTECHNICS SDN BHD

IR. CHOW CHEE MENG
Director
